The Will-Burt Company Donates Light Tower to Local Fire Department

The Will-Burt Company, the leading manufacturer of lighting mast products for the Emergency Services industry, is pleased to announce that they will be donating a Nightscan® Chief Light Tower to the Orrville Fire Department. This product will be installed on their new fire engine that will be delivered in fall of 2010. Similar to other cities across the country, the current recession is hitting Orrville and they would not have been able to include a light tower on their new truck without Will-Burt's assistance. The light tower that the Will-Burt Company is donating is valued at \$10,000.

Will-Burt's CEO and Chairman, Jeff Evans said, "We are honored that we are able to support our local community with this donation. We strongly feel that nighttime scene lighting is critical for any fire department and are happy that we could work with the City of Orrville to ensure that our fire department and community have this added protection."

The Will-Burt Company, located in Orrville, Ohio, is an employee-owned US small business, ISO 9001:2008 certified company that designs and manufactures pneumatic and mechanical telescoping masts and lighting systems for industries such as fire and rescue, military, cellular, broadcast and other specific custom applications. Will-Burt capabilities also include all phases of the contract manufacturing process from tool and die development to fabrication, powder coating, electronics and turn-key assembly for a variety of products in addition to telescoping mast products.
